The Canadian Cancer Society, the BC Cancer Agency and Northern Health along with researchers at the University of British Columbia and Athabasca University are collaborating on an exciting new program and research initiative funded by the Canadian Cancer Society.

The goal is to reduce the incidence of cancer through strengthening and advancing cancer prevention programs in northern British Columbia.

The Harmonization team will use a new approach in working together to reach more people and improve cancer prevention. Two innovative projects will be conducted by the team:

- **Stop Smoking Before Surgery** is an initiative to increase awareness of the benefits of stopping and to support patients in their decision to stop smoking before surgery. This project will be implemented in Prince George and Prince Rupert.

- **Men’s Healthy Eating and Active Living** is an initiative that will be implemented in two communities (Prince George and Dawson Creek) and include activities to promote healthy eating and active living tailored for northern men.

The team will evaluate the success of these initiatives, and the strategies used to work together to deliver the programs. The findings will inform and guide the Canadian Cancer Society’s future work to promote cancer prevention.

stop smoking before surgery

Why now?
Northern BC has the highest rate of cancer death compared to other health regions in BC. The smoking rate is 24%, much higher than the provincial average of 14%, and the region has the highest rate of lung cancer. Avoiding tobacco has been shown to be one of the most important ways to reduce one’s lifetime risk of developing and dying from cancer.

Surgery provides incentive and a timeline to stop smoking
Heightened concerns about one’s health prior to non-emergency surgery presents as an important time to provide smoking cessation counseling. The pilot program will support health professionals to consistently provide advice and counseling with patients who smoke. A smoking cessation program prior to surgery aligns with current efforts in Northern Health to expand hospital-based smoking cessation services, and with the BC Ministry of Health’s recent initiative to provide smoking cessation aids (i.e., low-cost prescription Champix™ or Zyban™ and free nicotine gum or patch).

Stopping smoking before surgery:

- Reduces the risk of complications
- Lowers the chance of surgical site infections
- Shortens hospital stays & reduces health care costs

Get involved!
Most smokers want to quit. Elective surgery provides an opportunity to re-open discussions about quitting. Health professionals are in a key position to provide support for tobacco cessation before, during and following surgery. Interested in being involved? Visit www.harmonization.ok.ubc.ca to learn more.
